

https://track.nsa.co.il לט certificate ה נוקית : Task # 1943 - ירוביצ עדיל אנדסה

Status:	Assigned	Priority:	High
Author:	וואד ינב	Category:	
Created:	02/03/2011	Assignee:	Aric Fedida
Updated:	07/03/2011	Due Date::	
Description:			

History

02/03/2011 04:38 pm - Aric Fedida

- Status changed from New to Assigned

The certificate is supposed to be valid, check this out:

```
<pre>
SSL Certificate   Type      Purchase Date  Expiration Date
track.nsa.co.il  PositiveSSL  04/10/2010    06/08/2011
</pre>
```

Can you describe in what scenarios this happens?

02/03/2011 04:46 pm - וואד ינב

I get an error when I try adding it to a yahoo pipe so I tried (on duckula.nsa.co.il)

```
<pre>
$ curl https://track.nsa.co.il/projects/hasadna/activity.atom?key=163badb4f230083ef29b52d1b9d6257a7c69c07d
curl: (60) SSL certificate problem, verify that the CA cert is OK. Details:
error:14090086:SSL routines:SSL3_GET_SERVER_CERTIFICATE:certificate verify failed
More details here: http://curl.haxx.se/docs/sslcerts.html
</pre>
```

curl performs SSL certificate verification by default, using a "bundle" of Certificate Authority (CA) public keys (CA certs). If the default bundle file isn't adequate, you can specify an alternate file using the --cacert option.

If this HTTPS server uses a certificate signed by a CA represented in the bundle, the certificate verification probably failed due to a problem with the certificate (it might be expired, or the name might not match the domain name in the URL).

If you'd like to turn off curl's verification of the certificate, use the -k (or --insecure) option.

```
</pre>
```
